• Tighten the propellers with both hands before each flight.

## 7. Flight

### Safe to Fly (GPS)

Before taking off, ensure the Aircraft Status Bar in the DJI GO app indicates 'Safe to Fly (GPS)'.

In the DJI GO App:

#### Auto Takeoff

The aircraft will take off and hover at an altitude of 4 feet (1.2 meters).

#### Auto Landing

The aircraft will land vertically and stop its motors.

#### Return-To-Home

Brings the aircraft back to the Home Point. Tap again to stop the procedure.

- The aircraft will not avoid obstacles while it is returning to the Home Point, and an appropriate RTH altitude **MUST** be set before flight. You should also use the control sticks to guide the aircraft. Refer to the Safety Guidelines and Disclaimer for more details.

### Manual Takeoff

Combination Stick Command to start/stop the motors

Left stick up (slowly) to take off

### Manual Landing

Left stick down (slowly) until you touch the ground  
Hold a few seconds to stop the motors

- Never stop the motors mid-flight, otherwise the aircraft will crash. Only stop the motors when the aircraft is on the ground or as required in emergency situations to reduce the risk of damage or injury.

## 8. Fly Safe

DJI encourages you to enjoy flying in a safe, responsible and smart way.

**DO NOT FLY** near or above people, near trees, power lines or buildings.

#### DO MONITOR YOUR ALTITUDE

and fly under 400 feet (120 meters).

**DO NOT FLY** in rain, snow, fog, and wind speeds exceeding 22 mph or 10 m/s.

#### DO MAINTAIN LINE OF SIGHT

and avoid flying behind buildings or obstacles that block your view.

#### No Fly Zones

# Remote Controller

The remote controller allows a flying range of 3,280 feet (1000m) in FCC compliant mode and 1,640 feet (500m) in CE compliant mode\*.

Built into the remote controller is a rechargeable lithium battery which lasts for up to three hours. The remote controller supports a Wi-Fi connection which, when paired with a compatible mobile device, enables live HD video transmission through the DJI GO app.

Here are the default flight controls ( Mode 2 ). The left stick controls the aircraft's altitude and heading, while the right stick controls its forward, backward, left and right movements. The gimbal dial controls the camera's tilt.

\* In a wide open area with minimal magnetic interference, and at an altitude of about 400 feet (120 meters), the remote controller is able to reach its maximum transmission distance – FCC compliant mode at 3280 feet (1000 meters) and CE compliant mode at 1640 feet (500 meters).
